Art Unit: 2872

#### DETAILED ACTION

### Claim Objections

 Claim 12 is objected to because of the following informalities: "the coil member" still lacks antecedent basis.
 Appropriate correction is required.

#### Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 3. Claims 1-5 and 7-12 are rejected under 35 U.S.C. 102(e) as being anticipated by Dalziel (US 6844952).

Dalziel shows a deflection device including a deflection element (mirror 110), a drive portion(105,106; note the paragraph bridging col. 4-5) driving the deflection element about two axes, a fixing portion(120) supporting and fixing the deflection element, a movable portion(107,110) including the

Application/Control Number: 10/705,275

Page 3

Art Unit: 2872

deflection element, a support member(101) for supporting and being connected to the fixing portion, and a gel damping member(130) between the movable portion and the fixing portion, wherein the damping member is provided in a vertical direction relative to the deflecting plane at the center of the rear side of the movable deflection element and thus near the rotation center of the deflection element (see fig. 2A,etc.). Dalziel further shows a projection (part of 120) extending to the rear side of the deflection member almost in the center part, with the damping member between the movable portion and this projection.

Dalziel further shows first(105) and second(106) coil members and teaches a magnet outside the periphery of these coils (paragraph bridging col. 4-5), a frame member(107) directly supporting the deflection element, with the coils built into this frame.

#### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at

Art Unit: 2872

the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claim 6 is rejected under 35 U.S.C. 103(a) as being unpatentable over Dalziel.

Dalziel teaches that the damping member(130) may be a dot of elastic material bonding the deflection element to the fixing portion(120) (note col. 6 lines 8-20). It appears that this would result in the dot of elastic material taking on a cylindrical shape due to its bonding contact between the deflection element and the fixing portion. However, since a cylindrical shape is not explicit in Dalziel's disclosure, damping members with cylindrical shapes are well known in the art. It would have been obvious to the ordinarily skilled artisan at the time of invention to modify Dalziel's damping member to have (at least partially) a cylindrical shape since this arrangement would allow for more contact with the deflection element, thus providing either better bonding surfaces or additional damping of vibrations.

## Response to Arguments

6. Applicant's arguments have been considered but are moot in view of the new ground(s) of rejection.

Application/Control Number: 10/705,275 Page 5

Art Unit: 2872

#### Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. McClelland discloses a deflection member including a damping member associated therewith (e.g. figs. 12-14).
- 8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS**ACTION IS MADE FINAL. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37

  CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mark Robinson whose telephone number is (571) 272-2319.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Drew Dunn, can be reached at (571) 272-2312. The fax phone number for the organization where this application or proceeding is assigned is (703) 872-9306.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-0956.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
